► Sequence of Word Study Skills

- 10.1** Suffixes ending in silent **e** (**-ace, -age, -ate, -ice, -ile, -ine, -ite**) (**spillage, favorite**); with taught affixes (**diservice, climates**)
- 10.2** Spelling Rule: Adding a suffix to a base word ending in **e** (**taping, lately, pronounceable**)
- 10.3** Spelling Rule: Adding a suffix to a one-syllable closed or r-controlled base word (**starred, shopful**)
- 10.4** Spelling Rule: Adding a suffix to a multisyllabic base word when the final consonant must be doubled (**regretting, admitted**)
- 10.5** Additional suffixes: **-ary, -ery, -ory, -ic, -ism, -ist, -ity, -ize, -ant-ance-ancy, -ent-ence-ency, -able-ably-ability, -ible-ibly-ibility** (**bravery, electricity**); vowel shifts (**residence, legality**)
- 10.6** Complex words with Latin base and suffix (**victory, credible**); complex words with **ic + i** suffix (**ethnicist, criticize**); complex words with prefix, Latin base, and suffix (**competent, reluctant**)

- 1 The police must examine clues to solve the crime.
- 2 You must keep the promise you made to your doctor to take your medicine.
- 3 There is no shortage of food for the party.
- 4 The bake shop promised to ship out the package of treats tomorrow afternoon.
- 5 Hector's absolute favorite pizza is ham and pineapple with extra sauce and cheese!
- 6 The power outage shut down all the shops downtown.
- 7 David promised his dad he would be more considerate about his brother's feelings.
- 8 Grandpa found the most affectionate kitten at the shelter last week.
- 9 The judge made a promise for justice in her courtroom.
- 10 That wound will not heal without a bandage.

- 1 The insectile figure from the story was very creepy.
- 2 Max discovered a beautiful morganite ring while sorting through his grandmother's attic.
- 3 Kerry had average grades, but her test scores were in the 99th percentile.
- 4 The teacher suggested he elongate the sentence and provide more details.
- 5 If you fixate on your misstep, you may not have enough courage to finish the race.
- 6 He did not want to encourage an infantile response from his kid brother.
- 7 Mom asked, "Where did the sound originate?"
- 8 You should not encourage your friend to personate her mom on the phone.
- 9 A company may liquidate assets if they close.
- 10 The average distance the projectile traveled was far greater in the new model.

- 1 The footage showed rescue teams displaying great courage.
- 2 A small blockage in the pipes resulted in poor drainage for the entire property.
- 3 Professor Jackson's tutorage had one objective; to encourage academic growth in her students.
- 4 Laura's favorite weekend activity was rebuilding classic cars with her grandmother.
- 5 If you encourage a puppy to be affectionate, it will grow into a friendly dog.
- 6 It is difficult to medicate an uncertain ailment.
- 7 The shipping costs were incorrect, resulting in an overage.
- 8 It is important to encourage everyone in the electorate to vote.
- 9 There is a lot of old coinage in circulation still.
- 10 Alex would demonstrate her projectile at the fair.

- 1** It would be difficult to impersonate someone who speaks a different language.
- 2** You use a special machine to count the votes of the electorates.
- 3** Grandpa always decorates for the holiday season.
- 4** The inspector often reexamines the machinery.
- 5** Dora loves all kinds of ice cream, but her favorites are rocky road and butter pecan.
- 6** Pablo wants to redecorate their room next weekend.
- 7** The puppy seemed unaffectionate at first, but quickly grew attached to its adoptive family.
- 8** All machinery is sold when a company liquidates.
- 9** Was it inconsiderate of Margo to ignore her mother's request to meet for lunch?
- 10** The machine threw projectiles right through the bay window.

- 1 With help from his tutors, Gary became an adept and passionate reader!
- 2 A promise of support from his boss gave Omar the leverage he needed for a promotion.
- 3 Drain seepage was mucking up every pathway.
- 4 A local teacher promised to tutor students at the orphanage.
- 5 Many kinds of lizards can regrow a lost appendage.
- 6 There wasn't enough voltage to power the device.
- 7 Many breeds of fish have protractile mouths for better food intake.
- 8 The brokerage firm promised to act in the best interest of its staff.
- 9 When the Chang family opened a café, they had support and patronage from their entire town.
- 10 The inspectorate made a promise to uphold all existing regulations.

- 1** It was impossible to validate the study without knowing the average number of participants.
- 2** The breach made it difficult to authenticate data.
- 3** The parentage of the abandoned infant had not been discovered.
- 4** It did not take much courage to assassinate the reputation of his enemy.
- 5** You can carbonate many drinks to make them fizz.
- 6** The scientists were perplexed as the substance seemed to gelatinate in front of their eyes.
- 7** I would encourage you to tell the truth rather than fabricate a response.
- 8** What resource could you use to confirm whether you need to hyphenate a word?
- 9** The students sat in saturnine silence.
- 10** If Vanessa impressed the station lead, she would get to commentate for the local team.

- 1** It took a lot of courage to sift through the seepage and rescue the kitten!
- 2** The director will often encourage a passionate performance on stage.
- 3** The play centers around a saturnine heroine who defeats the man sent to assassinate her.
- 4** The orphanage in the remote region will require additional aid.
- 5** Were you able to authenticate her findings?
- 6** It would be difficult to fabricate details with an overwhelming amount of contradictory evidence.
- 7** New restaurants must encourage patronage through advertisements and word of mouth.
- 8** The voltage was excessive and blew a fuse.
- 9** Marcy's brokerage firm was extremely profitable this year.
- 10** The combat medic showed great courage as she stitched her own wounded appendage.

- 1** Lee's language arts teacher spoke compassionately.
- 2** The cliffhanger leads the reader to assume that the criminal assassinates the hero!
- 3** Billy had an intemperate disposition which put him into a lot of hairy predicaments over the years.
- 4** Ivan was shocked by the thoughtful and compassionate tone of her brother's speech.
- 5** New research would invalidate any flawed data.
- 6** The teacher spoke passionately about the role of language comprehension in student success.
- 7** Overvoltage overwhelmed the lines and destroyed the machine.
- 8** Amy dispassionately relayed information about her philanthropic enterprise.
- 9** Information pulled from the machine validates past findings.
- 10** The large protractile made shifting the machinery an unattainable objective.

Old Medicine PART ONE

Modern medicine has a strange past. Today, if you fall and cut your arm, you go to a doctor for help. They examine you, bandage your wound, and give you medicine to prevent infection. However, it was not so long ago when treatments looked quite different. You may not have seen a doctor at all, and the treatment may have been with odd machinery, other illnesses, and even bugs!

Polio is a very serious illness that can lead to paralysis, which means you can't walk. In the early 1900s, before successful preventative medicine was developed, it could be found almost everywhere. When someone got sick with polio, it became difficult to breathe. In 1927 two experts developed a machine called the iron lung. A person's entire body was put

in this huge machine to allow them to breathe. On average, a sick person would spend two weeks inside, but doctors would elongate their stay when needed. The iron lung was creepy looking and difficult to use. Still, it was an effective treatment at the time.

Another favorite common treatment was blood drainage. When someone had a skin condition or infection, they may be offered this treatment. A considerate medic would fixate an insect to the problem area to suck out the blood. It may sound yucky, but today we know for sure that blood drainage can work for some conditions. However, we usually use needles now.

While these treatments may seem strange or difficult, they were (and can still be) safe and effective. Other treatments did not meet these same standards.

Old Medicine PART TWO

It's a fact that medicine was frequently approached in risky ways. Medics often made a problem worse when they used one illness to treat another. Knowing it could kill some germs, a few people were purposely infected with a fever. Medics would also use a treatment for one illness to cure another, even when there was no clear linkage between the two. They would encourage sick people to try these risky, uncertain treatments. As you would expect, the average person did not improve with such poor advice.

Sometimes, a person would end up with a different kind of treatment altogether. There was such a shortage of well-trained medics that many people would go to anyone with access to medicines. These people would impersonate trained medics and give really bad advice.

They would examine a very sick person and pretend they knew why that person was ill. To treat their illness, the ‘medic’ might speak in another language while administering deadly medicine. A large percentage of the public thought this was an effective treatment for many illnesses. The promise of relief from pain was just too hard to resist.

While this kind of care is seen as harmful now, it did help us push forward. Without it we wouldn’t know how important it is to keep a bandage clean or a fever down. Trial and error research helped build the foundation for modern medicine, and for that we should all be thankful. Just fewer insects, please!

Two Heroines in Medicine PART ONE

When you hear the word hero or heroine, you will likely think about someone who has courage, strength, and a commitment to accomplish great things. These words precisely describe two passionate women in American history: Elizabeth Blackwell and Clara Barton.

Both women made significant contributions to the well-being of others. Elizabeth Blackwell was the first woman to complete medical school in the U.S. Clara Barton made her mark, first as a nurse during the Civil War, then as the founder of the American Red Cross.

Blackwell and Barton were both born in the year 1821. Elizabeth was born in February near Bristol, England. Clara was born in December in North Oxford, Massachusetts. Both women had several siblings

growing up and both women affectionately spent time in their early adult life in the teaching profession.

Clara Barton was not your average teen. In fact, she established the first public school in Bordentown, New Jersey, when she was just 17 years old. In 1854, she moved to Washington D.C., and got a job in the U.S. Patent Office. She was one of the first women to work for the federal government. During the Civil War, Clara compassionately worked on the front lines as a nurse to Union soldiers. After the war, Clara made a promise to examine the problem of missing soldiers. She led a nationwide crusade that helped validate the location of 22,000 missing men.

Two Heroines in Medicine PART TWO

After finishing her work with the soldiers, Clara Barton traveled to Europe. There, she visited the Red Cross in Switzerland. This organization was established to protect the sick and wounded during wartime. The visit gave Clara the encouragement to help start the American Red Cross. She was the organization's president until she finally quit working at the age of 83. Clara Barton passed away in 1912.

A sick friend can be credited for Elizabeth Blackwell's decision to study medicine. Elizabeth was not the average medical student as she had to face much discrimination from others who didn't think women should become doctors. However, she did not let this injustice or their inconsiderate actions affect her. In fact, she finished at the top of her class in 1849. Elizabeth went on to London and Paris to advance her training.

When she returned to New York City, she opened a small hospital for women. She worked alongside her sister, Dr. Emily Blackwell. The two sisters also trained nurses for Union hospitals during the Civil War.

In 1868, Dr. Elizabeth Blackwell opened a medical college in New York City. A year later, she returned to her favorite place, England. She worked as a professor and published several books. Dr. Elizabeth Blackwell displayed great courage throughout her life, supporting the notion of women in medicine. She passed away in 1910 at the age of 89.

Both Clara Barton and Dr. Elizabeth Blackwell were indeed heroines of their time. Despite their different lives, they had much in common. They both left a long-lasting legacy of kindness to humanity.

- 1 JoAnn was deciding which soda to purchase when she realized she left her money at home.
- 2 All schools in the area will be closing tomorrow.
- 3 Billy traded lunches with his sister when he saw she had the larger dessert!
- 4 The mayor must be involved in all district events.
- 5 Are you thinking about trading in your old phone?
- 6 Andrew needed help to get the right drivers on his computer.
- 7 You could hear many beautiful voices as the choir sang and danced down the hall.
- 8 Have you chosen a magazine to read from the selection provided?
- 9 Tara would not purchase soup in a can because she liked making her own from scratch.
- 10 There are several places in town to fix a broken tablet.

- 1** Ginny's shoulder injury was the result of a failed attempt at balancing on her head.
- 2** It was surprising that she shared her favorite dessert with her brother.
- 3** Edward was tired after an evening of dancing.
- 4** The doctor recognized the rare disease and provided successful treatment.
- 5** If you spend a little time organizing your room, you will probably find your missing charger.
- 6** The edges of the broken glass were sharp and required careful handling.
- 7** Vera hurt her shoulder while riding her bike.
- 8** Computer prices have decreased this year.
- 9** It is challenging to get going in the winter when it is freezing outside.
- 10** It is important to gather detailed data about the disease to ensure it is handled properly.

- 1** Ingrid felt her shoulder pop when she raised her hand to answer the question.
- 2** The driver always took proper safety measures.
- 3** The disease spread rapidly, which led to a noticeable decline in the number of bees.
- 4** As promised, Dad emerged from the basement with all their old toys.
- 5** The bus returned home safely, despite the icy roads.
- 6** Sam severely injured the muscle in her shoulder when she hit the wall.
- 7** Traditional film is rarely used with the advancement of digital photography.
- 8** The soccer team was amazing yesterday!
- 9** After braving the burning building, several people were given medals for courage.
- 10** The entire city struggled as the disease spread too quickly for medical staff.

- 1** After retracing her steps, Eliza found her missing sneaker.
- 2** Sara hated replacing the water filter on the fridge.
- 3** Engaging in the snowball battle had several undesirable effects, including sore muscles and soaking-wet socks!
- 4** The doctor reexamined Amy's muscle to ensure she was healing properly.
- 5** Irma took several vacations this year, including one to Europe!
- 6** Sleep is a necessary part of recharging your body.
- 7** The vehicle misfired, making a startling sound in the driveway.
- 8** A.J. misplaced the activation codes for several of the computers.
- 9** Fatma reinjured her muscle just weeks after surgery.
- 10** The Jackson family renamed their new puppy Chewy, after he ate his third pair of shoes.

- 1** Our loan advisor opposed the purchase after seeing the recent intake numbers.
- 2** The magazine editor revised the essay before publication.
- 3** The power surged and blew several fuses.
- 4** Calvin simply adored the old cat, so he adopted it!
- 5** Ethan will be pursuing his teaching certification in the coming year.
- 6** Alex's cousin was baffled by her new academic pursuits.
- 7** Just as Grandpa reclined in his chair, one of the fuses blew.
- 8** The magazine cited several sources in its revealing article.
- 9** Customer support included the purchase order number with the shipment.
- 10** Derek was exhausted after revising the magazine layout again.

- 1** Mark was compensated after his shoulder was injured in surgery.
- 2** The quickly spreading disease motivated many counsel members to get involved.
- 3** Rereading text reinforces comprehension.
- 4** After all that fuss, the ‘intruder’ was just a raccoon!
- 5** The police dog had an imposing demeanor, but he was quite affectionate off duty.
- 6** Each student posed with their favorite book.
- 7** When quoting from a text, it is paramount that a proper citation be provided.
- 8** Eric’s shoulder pain improved greatly after indulging in a hot bath.
- 9** Angela attributed her racing heartbeat to the new treatment protocol for her disease.
- 10** Danny bribed his sister with treats, promising to return the machinery tomorrow.

- 1** The coach purged the cast from his shoulder and rejoined the team.
- 2** It was a nuisance to replace a lapsed license.
- 3** Tony didn't allow the obstacles his disease presented stop him from becoming an acrobat.
- 4** The machinery malfunctioned, leaving several people stranded upstairs.
- 5** Evan perspired profusely as he strained every muscle hoisting the beam off his friend.
- 6** Bailey looked compassionately at the lost child.
- 7** Blockades prevented entry to the municipal building.
- 8** Purging the building was paramount for a successful renovation.
- 9** The fugitives nearly evaded justice but were caught just before they could flee.
- 10** Pain surged through the muscle in his shoulder.

+ *affixes (prefixes and/or suffixes)*

- 1 The new team was enraged by the exploitative actions of the old owners.
- 2 Lauren's genes predisposed her to muscle injury.
- 3 Cindy was an indispensable member of the team.
- 4 The professor was ashamed after he mispronounced the guest speaker's name.
- 5 It would be inadvisable to travel abroad while the weather is so unpredictable.
- 6 His daughter's vulgar antics left Tony unamused.
- 7 Several students were moved by the motivational speaker's inspiring recovery.
- 8 Henry was unruffled by the strain to his muscle as he fled.
- 9 The IT team added software to the computer which enabled staff to work remotely.
- 10 Additional research invalidated the existing data.

Long-Distance Hiking

Chances are, you have enjoyed an afternoon of hiking. It's fun to spend a few hours exploring outside before heading home. But have you ever thought about spending days, weeks, or even months on a hiking trail? If you've decided to do some long-distance hiking, the Appalachian Trail, or A.T., could be the right challenge for you.

The A.T. starts in Georgia and ends in Maine. It is 2,200 miles long. Some people hike the trail in sections and go about 200 to 400 miles each summer, completing the trail over several years. However, hiking the entire trail at one time is quite common. This muscle testing experience can take about five months.

The A.T. was built with long-distance hikers in mind. There are several shelters all along the trail.

These shelters are between 5 and 15 miles apart, so it is important to plan your trip. The free shelters are open on a “first come, first served” basis. Although they are made to hold eight people, on a rainy night you will find considerably more people gathered under the shelter.

The A.T. also crosses many small towns. These towns have provided the hikers with places to purchase food, hotel rooms, and gear. Some of the towns are also recognized for their “Trail Magic.” Trail Magic is when townspeople leave hikers home-baked treats in the middle of the night.

If you are looking for an exciting and challenging new hike, consider trying the Appalachian Trail.

Modern Scarecrows

Whether the brain given to the Scarecrow in *The Wizard of Oz* made him smarter is debatable. But the robotic scarecrows in fields today are definitely smarter than the straw versions of the past.

Keeping pests and disease from destroying crops and animals has always been a problem for farmers. Finding unwanted wild animals huddled inside farm machinery can also be an issue. But with advances in robotics, motion detectors, and drones, farmers can now purchase devices that keep pests at bay. Motion-driven sprinklers throw out a burst of water, driving many animals away. A solar-powered robot with flashing eyes is used to scare large mammals such as deer. The robot can also howl in a variety of ways. This keeps animals from getting used to the sound.

Some devices make use of a bird's built-in fear response. When they hear distress calls from other birds, they panic. GPS-guided drones can remotely fly over a vast area of land. The drone's blades produce a loud hum while a megaphone blasts bird distress calls. This causes birds to fly away and avoid the area.

By the end of *The Wizard of Oz*, the Scarecrow is recognized as “the wisest man in all of Oz.” Today's smart scarecrows are saving countless crops by scaring off would-be predators while they roam the sky.

Rosa Parks Remains Seated PART ONE

Rosa Parks was born in Tuskegee, Alabama, at a time when segregation laws required Black people to use different restrooms, water fountains, buses, doors to buildings, and even schools. White people and Black people did not stand shoulder to shoulder anywhere.

Rosa left school when she was eleven to care for her grandmother and mother. At the urging of her husband, she completed school when she was twenty. As an adult, she became an activist and freedom fighter.

Rosa had to ride a segregated bus to work every day. This meant that she rode on a bus that had a section in the front for White people and a section in the back for Black people. On December 1, 1955, on her way home from work, she purchased a bus ticket

and sat in the first row available for Black people. After the bus became very crowded, White passengers were forced to stand. In response, the bus driver moved the placard saying “Whites Only” to the section behind where Rosa was seated. Then he told Rosa to get up and move further back. Rosa refused.

Many people have said that Rosa refused to give up her seat because she was old or just too tired. Rosa responded that she was not old and said, “The only tired I was, was tired of giving in.”

The bus driver told Rosa that if she did not move, he would call the police. She said, “You may go ahead and do so.” In the end she was taken to jail and fined.

Rosa Parks Remains Seated PART TWO

The city of Montgomery quickly united around Rosa. Flyers were printed asking all African Americans to refrain from using the city buses the following Monday. Masses of people became involved in the one-day boycott which was led by a young Martin Luther King. The boycott meant that all Black people would be walking to work, taking a cab, or carpooling that day. No one would purchase a ticket for the bus. The since named Montgomery Bus Boycott lasted 381 days.

The boycott led to the downfall of the public transportation system in Montgomery. As a result, lawmakers were forced to end segregation in the city's transportation system. Because of her time in

custody, Rosa lost her job as a seamstress in a nearby department store. Soon after that, death threats began making their way to her and her family. The Parks decided to move to Detroit where other family members lived. After moving, she ended up becoming the administrative assistant to a member of Congress - a position she held for many years.

Rosa Parks is often called the First Lady of Civil Rights as well as the Mother of the Freedom Movement. In 1999, Time Magazine named her as one of the Twenty-Five Most Powerful Women of the Age.

Rosa Parks was a model of courage and deep determination. She was one of the inspiring forces behind a movement that transformed our nation.

- 1** Dora dropped the entire shaker of salt in the soup.
- 2** Lorenzo was able to read the word after he tapped out the sounds.
- 3** It was the hottest day of the year and Alex was trapped at school until 2 o'clock!
- 4** Rowan's shoes were muddy from running the trail.
- 5** The drummer often sets the beat of the music.
- 6** Which parent was the maddest about the prank, Mom or Dad?
- 7** The softball team was able to do some hitting after setting up the machine.
- 8** David loved being a parent to such a joyful and silly little boy.
- 9** Emily slipped on spilled water and injured her shoulder.
- 10** Rashon put a massive amount of salt into the sauce when his parents weren't looking.

- 1 The castle guard stirred when he heard a loud bang.
- 2 Alex liked her father's homemade sauce far more than jarred sauce from the store.
- 3 The furry kitten acted like it was the guardian of the front door.
- 4 The collision was quite jarring, but everyone walked away unharmed.
- 5 You must take proper care of any open wounds to prevent scarring.
- 6 Margo landed a starring role in the school play as a guard for the queen!
- 7 The road would need to be tarred before winter.
- 8 The best part about camping outdoors is sleeping under the starry sky.
- 9 Stirring the hot fudge will prevent it from burning.
- 10 Without consent from her guardian, Pat was barred from the show.

- 1 Ann's puppy was so excited to see her, he couldn't stop wagging his tail!
- 2 Sitting on the beach can help calm your nerves.
- 3 Kim's favorite part of summer was riding her bike under the palm trees in the late afternoon.
- 4 Throwing that water balloon was like waging war against the sixth graders!
- 5 Grandma liked hopping into the calm lake water and making a huge splash.
- 6 Jean hoped she would get a starring role in the film.
- 7 The kitten was cuter than anything he had ever seen as it slept in the palm of his hand.
- 8 Shawn was caught taping a cheat sheet to the underside of his desk.
- 9 Ridding the world of disease was the main reason Layla wanted to become a scientist.
- 10 Edgar teared up after cutting his hand.

- 1 Tyrell was calm and unafraid until he saw the other boxer enter the ring.
- 2 The clerk was bagging up our food when the alarm went off.
- 3 Digging up the palm tree was difficult and time consuming.
- 4 Erik promised to return the mixer he borrowed.
- 5 There are no quick fixes for learning how to read.
- 6 Yeah, that was the biggest dog I've ever seen!
- 7 Hector logged off the computer after he made his purchases.
- 8 The foggy sky made the ocean appear calm and peaceful.
- 9 When the phone is ringing, you shouldn't answer with "yeah."
- 10 The athletes were showing off by flexing their muscles.

- 1** Jen hated riding the bus to school and wanted to be dropped off by a parent.
- 2** Dan's new backpack was digging into his shoulders.
- 3** When Tom visited his cousin, he finally found out how muddy and messy farming can be!
- 4** The guard stepped out in front of the queen.
- 5** Ling's trip to Europe was filled with sunny days on the beach building sandcastles.
- 6** Layla promised her parents she would be calm, but as soon as she saw their new puppy she started leaping with joy.
- 7** A.J. began plotting a water balloon counterstrike after his dad threw him in the pool.
- 8** The furry little kitten was softer than I expected!
- 9** Dennis remained calm even though he was barred from many of the rides because he wasn't tall enough.
- 10** The Chang family had to file a baggage claim report after a suitcase went missing on their trip to Europe.

- 1** Alex scarred her palm when she fell during the game.
- 2** The diver swam through very choppy water to get to shore.
- 3** The spicy dipping sauce was too hot for Grandpa!
- 4** After paddling around the lake for hours, the whole family enjoyed a yummy picnic.
- 5** Mom hugged the wall while skating around the rink.
- 6** The guard grew bored waiting for orders and began humming to himself.
- 7** After learning the cost they scrapped the whole project.
- 8** The twins named their new bouncing bunny Floppy because of his droopy ears.
- 9** Marissa begged her parents for the larger bedroom.
- 10** Jerry was starving and ripped open the bag of chips.

- 1** “The orange juice is too pulpy, and the eggs have too much salt,” grumbled Teddy.
- 2** Lauren’s toe started throbbing after she stubbed it.
- 3** David was stunned when he learned he was going to become a parent.
- 4** Excessive salt consumption can adversely affect your blood’s clotting ability.
- 5** The scanner malfunction caused a lengthy delay.
- 6** Isabella’s parents were stunned when she nabbed first place in the triathlon.
- 7** The cut of the garment would flatter any shape.
- 8** Ellen found that jotting down notes in her binder helped her keep the department meeting on track.
- 9** With such a witty parent, it was no surprise that Rosa had such a sophisticated vocabulary for her age.
- 10** Albert stayed up late cramming for his astronomy exam, only to learn that it had been postponed!

- 1 The guard was forced to relinquish his position when his blurred vision began to interfere with his work.
- 2 The shirred drapes looked flawless in the hall.
- 3 Dennis was always on his guard around large machines after a fluke accident marred his face.
- 4 Chuck charred all the burgers when he abandoned the grill in favor of volleyball.
- 5 Each prospective actor must audition for the role of the sparring guardian from the north.
- 6 The blurry photograph could be proof of his misdeeds.
- 7 Emily's dedication to her career spurred her desire to pursue an advanced degree.
- 8 The doctor knew the guard had a concussion after he began slurring his speech.
- 9 The machinery produced a disturbing whirring sound as the repair team guided the gears.
- 10 Joe boasted excessively after he parred the course.

- 1** It was difficult for the boxers to remain calm while sparring.
- 2** Grandma was bidding on every credenza that came up at the auction.
- 3** Paula gripped the ladder so rigidly she bruised her palm.
- 4** Evan lopped off his locks in favor of a shorter cut.
- 5** Mel was biding her time hidden in her room, hoping she would be spared from summer school.
- 6** An array of palm trees sloped down the property.
- 7** Larry spent the afternoon moping around the house after he injured his shoulder mopping up his mess.
- 8** Edward was calm boarding the plane, even though his friend conned him into skydiving.
- 9** Many students griped about heading back to school.
- 10** Ashley slopped excessive amounts of cleaner onto the counter as she bemoaned her weekly chores.

- 1 The traveling blogger struggled to remain calm when he discovered his luggage was missing from his suite.
- 2 After chugging an unreasonable amount of juice, Emily felt sluggish.
- 3 Jo was quickly coaxed out of her hiding spot.
- 4 The dismayed hiker gave himself a palm abrasion tugging at his harness.
- 5 Jon was vexed after flubbing his line during the play.
- 6 After lugging the net around the beach, the group of kids finally found an open spot to play volleyball.
- 7 Pat shrugged off the poor assessment, responding with a sharp “yeah” to each question.
- 8 The old building was decayed and sagging.
- 9 When asked if he fabricated an injury to get out of his chores, Kevin responded with a sluggish “yeah.”
- 10 Amy rigged her own harness for the stunt.

- 1 Howard just shrugged when he was asked if a parent or guardian had seen the progress report.
- 2 Many people hate moving because of the painful task of lugging heavy objects up the stairs.
- 3 Brinda often trotted after her older brother.
- 4 The homeowner nearly demolished the palm tree after marring it with the lawnmower.
- 5 Lewis was quite vexed after stubbing his toe.
- 6 The construction team quickly nixed the expensive materials.
- 7 The top runners were pitted against each other.
- 8 Audra's parents did not know sparring was such an important part of training for a boxer.
- 9 The perspective buyers jotted down a few notes before bidding on the item.
- 10 Joseph was so exhausted he rubbed his eyes until his vision went blurry.

Open-Water Swimming

When most of us think of competitive swimming, we envision a 50-meter pool with lane lines and lifeguards. We do not think of dipping into salt water with no clear path. However, some people like a bit more of a challenge with their swimming, and they enjoy open-water swimming or long-distance swimming.

While no large body of water is barred, swimmers must swim a minimum of ten kilometers. Unlike the calm pool water, an open swim may be jarring. When the race begins, you may spend some time rubbing up against other swimmers in a free-for-all. As the race progresses, swimmers begin scattering. Because there are no lane lines, planning your path is necessary. Swimmers are always watching the horizon to make sure

they are moving in the right direction. With no walls to hang on to, there is no quitting in open water swimming!

Some of the most sought out swimming events are those that make up the Triple Crown of Open-Water Swimming. The Triple Crown consists of three swims. The most well-known swim is 21 miles across the foggy English Channel. The next is in sunny California, from the mainland to Catalina Island. This is about 26 miles. The last swim is the biggest, spanning the open waters around Manhattan Island.

If you find yourself up for a new challenge, you could try grabbing your wetsuit and diving into the open waters for a new swimming experience.

The Impact of the Great Depression

When the 1929 crash of the stock market stirred the Great Depression, people played down the consequences. Even President Herbert Hoover described it as “a passing incident.” Yeah, he thought things would return to normal after a couple of months. Nothing could have been further from the truth.

Banks flopped, farms crumbled, and shoppers found stores shutting their doors left and right. Before long, 15 million Americans were unemployed. People thought that working hard and not quitting was the way to success. Therefore, they often felt embarrassed to accept assistance. This resulted in severe widespread poverty even with women and children entering the labor force to help their families survive.

As the country’s problems expanded, a wealthy governor from New York stepped up. He ran for

President and was elected in 1932. His name was Franklin Delano Roosevelt. He penned a way out of the depression. It was fittingly called the New Deal. Roosevelt's winning plan involved first saving the banking industry. Then came expanding the role of the government to help guard against poverty and hopelessness.

The Great Depression lasted into the early 1940s. Its impact reached beyond America's borders - spinning into the economics of places such as Germany and Brazil. The day-to-day struggles caused many people to change the way they approached their finances forever. Some people guarded their earnings closely. Others were driven to set up a calm and happy life for themselves. Either way, the impacts of this historical event were scarring and long-lasting.

Words Have Power

In her youth, Toni Morrison heard her grandfather bragging about having read the Bible when it was illegal for him to do so. When he was growing up, reading was banned for Black men and women. Hearing a grandparent speak passionately about this helped Toni understand that “words have power.”

Toni Morrison was a witty and talented writer who penned many novels about modern and past experiences of Black people. Although sometimes snubbed in her early career because of her depiction of challenging topics, it wasn’t long before Toni nabbed accolades for her gripping and impassioned novels. Most notably winning a Nobel Prize in 1993 and snagging the Medal of Freedom in 2012.

Toni Morrison is often praised as a trailblazer for Black female writers. During the peak of her career,

Toni was getting some mixed responses from the public. While some people were brimming with flattery for the talented writer, others began nagging her about the subject matter of her novels. She remained calm as prodding questions flew her way about why she would write just about the Black experience. She could have shrugged off these questions but instead used them for spurring important discussions. It wasn't *just* anything she was writing about—these were some of the most important untold stories in American history.

Toni Morrison held a pen in her palm and jotted down the Black American experience, changing the novel forever. Her stunning depictions and eloquent prose opened up a whole new world of writing, and opened up many hearts as well.

Skin Cancer Prevention

Did you know that skin cancer is the most common cancer in the United States today? Whether you are jogging, trekking, swimming, or sitting on the beach, spending long hours in the sun may be putting you at risk. Most skin cancers are caused by ultraviolet (UV) rays. Usually, these rays come from the sun, but some may come from man-made sources such as tanning beds. The good news is there are many things you can do to help guard against the onset of skin cancer.

First, you should consider stepping up your skincare by using sunscreen. Experts recommend dabbing sunscreen on all exposed skin every day. Several layers are more effective than one, so don't hold back when dripping sunscreen into the palm of

your hand. Try plopping a bottle next to your phone to ensure you don't go anywhere without it.

Second, wear clothing that blocks the UV rays. Loose-fitting clothing made of dark, tightly woven fabric helps block sunlight while keeping you cool. Wear a wide-brimmed hat and sunglasses. If your sunglasses don't block UV rays, consider purchasing some that do, and encourage your parents to do the same.

Finally, try to stay in the shade and avoid direct sun between 10 AM and 4 PM, when the UV rays are strongest. You can enjoy being outside while also protecting your skin using these sun safety tips. Protecting the health of your skin rests firmly on your shoulders.

- 1** Donald fastened his hiking equipment to his backpack and headed into the woods.
- 2** It was difficult to stay focused and listen to such a long and confusing story.
- 3** After ordering dinner, Kim opened her birthday card from her parents.
- 4** Alex had forgotten to fasten her bracelet and dropped it on her way home.
- 5** It was upsetting to learn that the other investor backed out of the purchase.
- 6** Molly excelled in both academics and sports.
- 7** Numbering the seats made keeping track of guests simple and effortless.
- 8** Lev needed a reminder to fasten his seatbelt.
- 9** It is very important to listen to your coach when you are a beginner.
- 10** Ken's favorite fairy tale involved a heroine entering the forbidden castle to save her loyal pet dragon.

- 1** My parents had a difficult time programming their new remote.
- 2** The commander successfully transmitted a dozen reports before the machinery failed.
- 3** Lila admitted she struggled to run after she pulled a muscle on the third lap.
- 4** Alex preferred playing soccer over basketball.
- 5** After being referred to an expert to help treat his disease, Hugo's health improved quickly.
- 6** Shelly conferred with dozens of other experts.
- 7** The research team used a transmitter to communicate with their crew.
- 8** David transferred schools a dozen times before he finished.
- 9** Omar was committed to succeeding at his new job.
- 10** Harry was conflicted about the move after seeing dozens of problems with the property.

- 1** I wonder if enlisting help would allow you to move the heavy mattress.
- 2** After unpacking several boxes, the Petersons had their first family dinner at their new home.
- 3** The vacation property abutted a beautiful beach full of palm trees.
- 4** After wondering where her friends went in such a hurry, Samantha found them unwinding in the pool.
- 5** Paula was unstoppable when she hit the track.
- 6** Even with plenty of preplanning and preparation, Edgar still got lost on his way to the airport.
- 7** I wonder if the store will be as successful after reopening.
- 8** The unplanned trip left Holly feeling renewed.
- 9** Tammy enlisted her brothers to help plan a surprise party for their grandparents.
- 10** Lawrence was wondering if he entrusted the right person with his secrets.

+ *affixes (prefixes and/or suffixes)*

- 1** Several reoccurring issues with the machinery forced the company to replace the printer.
- 2** Jana remained calm even after being readmitted to the hospital.
- 3** After recommitting to the spirit of the play, Nigel's performance became unforgettable.
- 4** Admittedly, it was difficult to show the spirit of the party in just one photograph.
- 5** Lewis was uncommitted and disinterested when he first started playing the flute, but he quickly improved.
- 6** Readmitting her to the program was challenging.
- 7** Jeremy recommitted to the project after learning the winner would get a prize.
- 8** Deprogramming was Dr. Burton's specialty.
- 9** Patrick had an unforgettable spirit that his teachers and classmates admired.
- 10** Jon was embarrassed after he misreferred to his teacher as his parent.

- 1** Mom advised the twins to listen to each other, but they bickered about the party planning instead.
- 2** It was difficult to fasten the safety belt because it was retrofitted to the vehicle.
- 3** The team was given several accolades after outwitting the kidnapper.
- 4** The group of children had to be corralled so their life jackets could be fastened before swimming.
- 5** Layla struggled with the formatting of her paper.
- 6** Hannah was bewildered after being outwitted by her younger sister.
- 7** It was difficult to listen to the witness after learning he had omitted so many details.
- 8** Julie's parents outfitted the entire family for a blustery evening after hearing the weather report.
- 9** The construction company was always backlogged.
- 10** Sally made the regrettable decision of outbidding her rival on something she didn't really want.

- 1** At least a dozen homes lost power when the transformer blew.
- 2** The boat's propeller malfunctioned during testing.
- 3** Clancy deferred dozens of questions about the product to his discerning supervisor.
- 4** Sherry's doctor dispelled several unsettling myths about her disease to ease her transition.
- 5** After submitting dozens of manuscripts, Angelo obtained an offer from a publisher.
- 6** The jury acquitted the suspect after a compelling witness emerged.
- 7** Joe transformed dozens of homes every year.
- 8** The layout was submitted just before the production deadline.
- 9** The transformer was emitting a strange noise.
- 10** After deferring school to travel abroad, Jeremy returned home with a dozen new stamps on his passport.

- 1** It was no wonder the attorney was disbarred after his disgraceful actions in court.
- 2** Harry unbolted the lock and flew out the door as soon as he saw the new puppy.
- 3** Dad was wondering why someone rehashed such a sensitive subject over dinner.
- 4** Sheena untucked the sheets on the bed.
- 5** Shelly reclasped her grandmother's bracelet after unkinking the chain.
- 6** I wonder if the outdated club will be more successful after being revamped.
- 7** Unclogging the piping on the old property was the team's first task.
- 8** Alex spent their family time wondering if her brother had any redeeming traits at all.
- 9** Unsnarling Mel's hair was proving quite difficult.
- 10** Harry unclenched his jaw and relaxed after his impromptu meeting with the campus recruiter.

- 1** After emitting a bothersome sound, Aron was compelled to replace the stove.
- 2** Corralling the group of children proved challenging.
- 3** The actress's lively spirit propelled her into a lucrative career.
- 4** The witness omitted facts and was dismissed.
- 5** After reformatting, the team had successfully developed an inspiring presentation.
- 6** Jade inferred that the photographs were misleading and did not show the true spirit of the team.
- 7** Dennis was not prepared when he made the regrettable decision of unclogging the pipes himself.
- 8** The propeller was dislodged from the toy plane after it was thrown across the room.
- 9** After globetrotting for several years, Sam discovered a different spirit for every nation.
- 10** The abettor to the kidnapping was detached and remorseless in court.

Blame The Dust Bowl PART ONE

Sometimes called the Black Blizzard, the Dust Bowl was a period of time when severe dust storms swept across the Great Plains of America. The unforgettable storms began in the early 1930s. They brought strong winds and thick dust across parts of Colorado, Kansas, Texas, Oklahoma, and New Mexico.

The reoccurring storms in the Great Plains were extremely destructive. Because of this, an estimated 35 million acres of farmland had been destroyed by 1934. Another 125 million acres of land had lost its top layer of soil - the part of the soil that is necessary for planting crops. As a result, animals and crops failed across the entire region.

At times, the effects of the unpredictable storms even reached the east coast of America and beyond. In

1934, a gigantic and unstoppable dust storm traveled 2,000 miles. As a result, it dropped a blanket of dust across New York City and Washington, D.C. The storm dumped powdery dust on everything. It even got inside homes through the smallest of cracks. As the dust spread to the Atlantic Ocean, it left crews on ships wondering why they were coated in dust.

The worst storm happened on April 14, 1935. Starting in Oklahoma, cold air and strong winds whipped up a dust cloud that grew to hundreds of miles wide and thousands of feet high. As panicked people listened to the wind and fastened their eyes to the sky, they knew they had to run for cover. By the time the sky cleared, the storm transferred an estimated three million tons of soil. It's no wonder that news reporters fittingly referred to this horrific day as Black Sunday.

Blame The Dust Bowl PART TWO

It took great American spirit to survive the terrible Dust Bowl years. With dust floating in the air and covering the land, it's no wonder that people's health suffered. Many victims experienced chest pain and had difficulty breathing. Due to severe illness in their lungs, some people never recovered. As upsetting as it is to think about, we don't actually know for certain how many people passed away.

Population levels decreased. However, the number one cause of the rapidly declining population was not deaths. It was a result of families preferring to leave the area to seek work and a better life. In fact, over two million people left the Dust Bowl states in the 1930s. This resulted in one of the largest migrations in the history of America. Oklahoma alone lost over 400,000 people to migration, many of whom transferred their lives to California.

The economic effects of the storms were compounded by the Great Depression and lasted for dozens of years. Consequently, the President of the United States, Franklin D. Roosevelt listened. He took steps to help the people directly impacted by the storms, especially farmers. In addition, Congress admitted that the country needed help. They conferred and established programs to put local farmers to work and develop ways to stop soil erosion.

Windbreaks, also called shelterbreaks, were planted to protect soil and crops from dry winds and prevent soil erosion. Windbreaks are strips of large shrubs, trees, or tall crops that act as a kind of wall. Because of these government efforts, most of the plains were restored by the early 1940s.

Globetrotting to Iceland

If you consider yourself a globetrotter, you may have visited dozens of places around the world. But have you ever been compelled to visit Iceland? Iceland is a European country in the North Atlantic Ocean. In recent years, Iceland has committed to becoming a travel destination for Americans by offering more affordable flights between Iceland and the United States. Admittedly, many Americans use Iceland as a stepping-stone to get to mainland Europe. Those American travelers who don't spend any time in Iceland may find themselves regretting their decision.

With a little preplanning, you can see Iceland's amazing volcanic black sand beaches. The strong tides of the Atlantic Ocean have carved out arches

from the cliffside. There is also a large outcropping of pillars several meters offshore. According to legend, these huge pillars were once young trolls who rebelled against their parents and stayed out after sunrise. Since trolls are forbidden to see the sun, they were transformed into stone.

Day-trippers may be wondering how best to spend a limited amount of time. An unplanned afternoon walking through a glacier and swimming in one of the many hot springs could be a good way to unwind. If your preferred trip involves more city spirit, the capital offers a large selection of restaurants.

Whatever your interests, committing to a trip to Iceland could be an unforgettable experience.

Sugar Temptation

Jasper and Rowan were feeling downtrodden after their visit to the doctor's office. Their blood sugar was raised because they both submitted to temptation and ate sweet treats instead of healthy foods. Admittedly, it never occurred to them that their eating habits could lead to such upsetting health consequences.

They decided to meet with a fitness trainer. She formatted a meal plan with limited amounts of sugar, preferring fruit over candy. She compelled them to give up their sweetened coffee. They were permitted only one sweet treat per week. Jasper did wonder if their trainer was overstepping, but Rowan said they needed to listen to her suggestions. Jasper and Rowan deferred to their trainer's advice and set up a

healthy new diet. They omitted most sweets and even developed a new exercise plan.

These changes propelled Jasper and Rowan to better health. At first it was upsetting to give up the dozens of sweets that they enjoyed, but when their blood sugar decreased they stopped regretting all their sacrifices. Jasper and Rowan were fully committed to their new, healthy life.

- 1** The downtown eatery does a wonderful job balancing tasty treats with healthy snacks.
- 2** We raced to weatherize the cabin before snow.
- 3** Martin dropped his magnetic board on the way up the steps.
- 4** My aunt became an alarmist after hearing the hypotheses on storm patterns.
- 5** Shelby had forgotten she could reference a dictionary when she struggled with spelling.
- 6** It would be difficult to customize the program without any expertise in engineering.
- 7** Grandma's accessory had the largest gem ever.
- 8** Staffing shortages made it difficult for the crew to keep up with inventory.
- 9** The depository had some expertise in dealing with lost or stolen items.
- 10** The computerized directory was a good place to find everyone's title and area of expertise.

- 1** My cousins often spend time walking through the greenery at their favorite park.
- 2** Jessica loved watching classic films with her grandparents.
- 3** The humidity was making Angie pour sweat while running.
- 4** The farm owners allowed guests to explore the hatchery to conduct analyses of growth.
- 5** Nurse Stevens filed doctor's notes in alphabetic order to ensure he always provided the right medicine.
- 6** Professor Yang found my idealism refreshing.
- 7** The elementary school teachers used multiple analyses to build a new math program.
- 8** The realist knew that some of her hypotheses could not be proven.
- 9** The graphic novel was engaging for the students.
- 10** If you cross the boundary line, a guard will appear and remove you.

- 1** The bakery liked to experiment with new recipes.
- 2** Arthur took the opportunity to visit his grandparents while on break from school.
- 3** An experiment was staged to test current security measures in the building.
- 4** Ed didn't let his cousin's negativity affect his mood.
- 5** Travis used too much soap while mopping, which made the floor slippery.
- 6** The experimental treatment reduced the severity of her disease.
- 7** The company's primary contact for operations was trapped in traffic.
- 8** Oscar's bravery and positivism while facing serious illness was admirable.
- 9** Experimental medicines are a rarity in certain regions of the country.
- 10** The robbery was interrupted when a building guard heard a jarring sound in the back room.

- 1** The experiment would be dependent on the competence of the scientists conducting it.
- 2** The new residence hall was larger than expected.
- 3** Lauren was confident her favorite team was on a winning streak because she went to every game.
- 4** Nancy was admitted to the residency program at the same clinic her father worked as a nursing director.
- 5** There were consistent results throughout every experiment.
- 6** Several candidates were running for president in the small country's election.
- 7** Her doctor's confidence in the experimental treatments made Helen feel at ease.
- 8** Jay was not concerned about his grandparents' dependency on him after the tornado.
- 9** Consistency is necessary for staying healthy.
- 10** The observant child noticed a furry friend following him on his family's walk downtown.

- 1** It may be more sensible to alter your approach.
- 2** The movers shifted the baggage sensibly to avoid injury.
- 3** A guest took responsibility for the broken drainage pipe.
- 4** Did you get my text about acting responsibly at camp?
- 5** Outdoor events were completed flexibly in case it began raining.
- 6** Can you research a more affordable alternative?
- 7** The affectionate kitten was hardly resistible after a bath.
- 8** Jacob was responsible for writing out their speech while Betty built the demonstration.
- 9** Trinity decided to work on her flexibility after injuring herself while running.
- 10** This computer performs well, but this alternative model is respectable too.

- 1** The storm's path altered, which reduced its severity in the region.
- 2** Jacob was in the minority when he voted against changing the swimming uniforms.
- 3** Mel was an authority on fossils and promised to examine their findings.
- 4** The majority of the team transferred to an alternative boat when the leakage began.
- 5** Jada improved her speed by running with regularity.
- 6** Latoya concluded that green living was an important part of preserving humanity.
- 7** Jaylen joked he was in an alternative universe when his brother gained popularity at school.
- 8** Housing was built near the western extremity.
- 9** There is a noticeable similarity in appearance between those cousins.
- 10** The popularity of the book went far beyond the author's expectations.

- 1** Students worked independently on the experiment.
- 2** A safety plan for the building was nonexistent before this year.
- 3** A nonacidic compound was used to repair the chair.
- 4** Latrell had a clear expertise when it came to electronics.
- 5** The maintenance team purchased customized machinery for their needs.
- 6** Mallory wondered if Keshawn's perfectionism would slow down their team.
- 7** The inorganic matter was used for experimental purposes.
- 8** The reactionary response was unforeseen and upsetting.
- 9** Inconsistency in testing scores made Jon's teacher question if he struggled with a learning disability.
- 10** Activists from every group promised to lend their expertise to the cause.

multiple affixes: changing base words, includes vowel shifts

- 1** Her insensitivity to the tree pollen suggested treatment was working.
- 2** Jayla unobservantly transferred a call, placing the customer back on hold by mistake.
- 3** The refinery did many analyses of their product to make sure it was suitable for marketing.
- 4** Mom installed nonslippery flooring in my room.
- 5** Ethan slipped on stage last year, leaving him with a certain amount of insecurity during public speaking events.
- 6** Unpublicized results of the experiment showed promising results.
- 7** Caleb often planned out his day with his imaginary friend, Luke.
- 8** The medical building computerized their records.
- 9** Kelly admitted she was unobservant and hadn't noticed they changed the meeting date.
- 10** Was the material reoxidized during the experiment?

multiple affixes: -ic suffix + another i suffix: -ism, -ist, -ity, or -ize (/k/ to /s/)

- 1** Athleticism runs in Jim’s family—his mother and grandmother are both amazing runners!
- 2** The roboticist offered his expertise as a judge at the fair.
- 3** There were several books in the library that explained atomicity.
- 4** Alex computed the toy’s sphericity as part of his experiment.
- 5** Classicism is an expertise in a specific standard of art.
- 6** Unplanned additional practice helped athleticize our team.
- 7** An organicist divided the groups of mammals based on their habitat.
- 8** Were you able to consult with the roboticist?
- 9** An organicist spends a lot of time researching medicine.
- 10** Mira’s routine demonstrated her athleticism.

- 1** The infirmary doctors monitored wounds for infection and treated each injury with great expertise.
- 2** The acrobatic team showcased their most gifted athletes.
- 3** The armory offered a tour of historic battlegrounds.
- 4** Their dreadful results drew attention to the laxity of the staff and their own lack of expertise with the machinery.
- 5** The hypotheses were contradictory, causing a dilemma between the teams.
- 6** After dozens of complaints about tagged buildings, the city finally addressed the vandalism.
- 7** There were dozens of iconic marble casts on display at the gallery.
- 8** For a moment it seemed like Jayla was telepathic, knowing others' thoughts before they spoke.
- 9** The commentary was inaccurate and misleading.
- 10** Researchers posed several hypotheses as to how a large nomadic tribe had stayed hidden for so long.

- 1** The validity of the hypotheses was questioned after one of the researchers abruptly left the team.
- 2** Tina was complimentary of her parents' new car.
- 3** Analyses of the crimes suggested an arsonist unwittingly misdirected law enforcement.
- 4** Benjamin was resolved to be calm and diplomatic during the heated debate.
- 5** Ellen was sure her cousins were telepathic after winning another team game.
- 6** The sedimentary rock looked out of place in the narrow grove.
- 7** Generational group analyses concluded the inhibitory acts were a byproduct of norms in the isolated region.
- 8** Audra would patronize the local community playhouse scouting for talent.
- 9** Gemma designed her own stationery for the bakery.
- 10** Liz spotted her parents dancing and bemoaned, "Those are the absurdist moves I've ever seen!"

- 1** The sparsity of subjects made an indisputable experiment unattainable.
- 2** Do you know how she calculated the cubic footage of the room?
- 3** The attorney offered the witness immunity for her testimony.
- 4** Do you know if the tributary has overflowed in the past?
- 5** The supervisory agent relinquished his weapon during the investigation.
- 6** His cursory response was disparaging.
- 7** An experimental new approach revealed the artwork was actually a forgery.
- 8** The cub was released from captivity after his health improved.
- 9** The advisory board nabbed a few new members!
- 10** To earn full credit, you must write a summary after completing the experiment.

- 1 A failed experiment changed the consistency of the glue.
- 2 During her often-disputed ascendance to power, she approved many experimental projects.
- 3 An observant bidder spotted a valuable antique at the auction.
- 4 Marigold was confident the airline lost her luggage.
- 5 The chances of these events happening in concurrence with each other are very slim.
- 6 The competency of the scientist was questioned after spillage from his experiment forced the laboratory to close.
- 7 The existence of spirits is often disputed.
- 8 A passionate speech delivered by the president inspired listeners.
- 9 During my residency, I assisted with an experimental treatment for pain.
- 10 The residence hall must be sanitized.

- 1** The team would have to alter their workload if they wanted to retain a sustainable pace.
- 2** Using compressible materials made rebinding the broken parts a breeze.
- 3** The compressibility of the luggage allowed it to fit in the narrow storage compartment.
- 4** Their hiding spot was deducible from the clues they left behind.
- 5** An intruder is responsible for this broken door.
- 6** No alternative options presented offered the responsible sustainability their company needed.
- 7** Can you alter the layout and switch to compressible materials?
- 8** Solving the portability issue of the machinery was of the utmost importance.
- 9** The rigging for the boat was flexible and foolproof.
- 10** The sustainably built homes in this area have alternative methods of cooling.

- 1** Will rebinding the cast alter her mobility?
- 2** The crowd was impressed by the acrobat's agility and speed.
- 3** Lisa's parents urged her to find an alternative way to express her frustration without using profanity.
- 4** The antique vanity sold quickly at the auction.
- 5** The magnets repelled from each other because of their respective polarity.
- 6** Her friend showed great sincerity after their humbling loss.
- 7** Fans of the satirist were elated to discover she would alter her tour to do additional shows.
- 8** The parasitic infestation required alternative treatment.
- 9** Is the entrance exam mandatory for all prospective students?
- 10** Anna wondered about her brother's sanity when he agreed to oversee the entire play.

- 1** Tim idolized his older cousins and followed them around at every family function.
- 2** The street was inaccessible due to fallen branches.
- 3** The experiment was invalidated after a researcher slipped information about the treatment plan.
- 4** Ginny admired her cousin's nonconformity.
- 5** Logan and his friends patronized their favorite restaurant almost every Friday.
- 6** The opposing team was uncomplimentary towards their conceded challengers.
- 7** The experimental medicine proved effective and revitalized Kerry.
- 8** After idolizing the drummer for so long, Tom was stunned when they ended up on stage together.
- 9** Don felt his family's manners were nondiplomatic.
- 10** Paula's disillusionment with nomadic living was unsurprising given her regrettable experiences while globetrotting.

multiple affixes: includes changing base words, vowel shifts, and -ic suffix + another i suffix: -ism, -ist, -ity, or -ize (/k/ to /s/)

- 1** The patron apologized with such insincerity that he was removed from the building.
- 2** The adults named their team “Relative Insanity” in the family bake-off.
- 3** Immobility from the sagging cast was exasperating.
- 4** When used effectively in website configuration, iconicity greatly enhances user experience.
- 5** After careful analyses, the team was discreetly remobilized.
- 6** The spirited tonicity of her acceptance speech foreshadowed a passionate career ahead.
- 7** It is inadvisable to conduct this experiment without taking proper safety precautions.
- 8** The phonemicist used her expertise in language to decipher the opposing team’s code.
- 9** The sluggish unit was invigorated after remobilizing.
- 10** Analyses were completed to measure the allergenicity of the byproduct.

Megan's Robot PART ONE

Megan came from a very athletic family. However, sports just did not interest her, so she was looking for an alternative use of her time. One day, she saw a flyer posted in the school lunchroom. It was an invitation to come hear about the school's robotics club. Megan snapped a photo on her cellphone and entered the date and time in her calendar app.

A few days later, Megan entered the room where the robotics club meeting was held. She was pleasantly surprised to find that there was a lot of interest in the club. The club's president, Roger, began with some introductions and a definition of the word robotics. Megan learned that robotics is the design, construction, and use of machines to perform tasks—tasks usually done by humans.

Next, Roger explained that the school's robotics club was a group of students who were interested in learning about and experimenting with robots. The club met after school twice a week and Mrs. Sanderson, the school's engineering teacher, was the staff leader. Most importantly, Megan learned that it was not necessary to have an expertise in robotics before joining the club. The members all start out as beginners.

Roger ended his talk by sharing photos of some of the club's projects over the last two years. Megan was immensely impressed with what she saw, and she knew this was an opportunity to put her excellent science and math skills to work. When Roger passed around a sign-up sheet at the end of the meeting, Megan eagerly added her name.

Megan's Robot PART TWO

Megan attended the robotics club meetings twice a week. She made new friends and enjoyed learning from the more experienced members. It was not about perfectionism. The club focused on imagination, teamwork, and fun.

Each year, the club participated in robotics competitions - local, state, and national. During her first year, Megan prepared for a local competition. She was tasked with building a robot that could perform an everyday task. Megan learned about how to construct a robot. A good robot needs a body or robot frame, sensors that detect things in its environment, and a “brain” or processing unit. In addition, robots need motors or moving parts and a power source.

Megan also had to learn how to develop a code for her robot. The coding for a robot is like instructions

that a robot or computer program can read and perform. There is a lot of experimenting with this process, altering the design and the code many times. Megan loved the challenges.

After several months, Megan had her first robot working. The everyday task it performed was to make a sandwich. Her robot, which she named Harvey, could pick up a slice of bread, put a slice of meat on it, and then cover the meat with another slice of bread.

On the day of the local robotics competition, Megan confidently showed off her lunch-making robot, Harvey. The rest of the robotics club was in attendance observantly cheering Megan on each step of the way. Megan placed third. It was just the beginning of her visionary work and expertise with robotics.

What Caused the Great Depression? PART ONE

Beginning in 1929 and lasting until 1939, the Great Depression had a worldwide impact. It was, in fact, the worst economic depression ever experienced. So why did it happen?

This question and related hypotheses have been examined for many years. Researchers with expertise in history and economics have sensibly outlined several important factors that contributed to the unprecedented and persistent Great Depression.

Let's start with the "Roaring 20s." As the name suggests, life was good! However, the U.S. government set forth one experimental policy after another. Most of which inflated the idealistic perception about how good things really were. This encouraged investors to embark on new enterprises. The emergence of this

temporary influx of money gave rise to an economic boom. Prices began to rise until business was no longer profitable.

It doesn't take someone with economic expertise to tell you that when profits go away, a downward shift begins—and that's just what happened. Admirably, emergency adjustments to interest rates were made and the banks started lending out more money.

However, these alternative circumstances caused the majority of U.S. residents to make false assumptions about the economy.

After years of boom and bust cycles, profits fell. As a consequence, the stock market crashed on October 24th in 1929. This famed day is also called Black Thursday.

What Caused the Great Depression? PART TWO

President Herbert Hoover set forth actions to intervene with the economic hard times. However, his visionary ideas took a severe recession and turned it into a turbulent depression. One example of this was the passing of the Smoot-Hawley Tariff in 1930. This law intended to boost prices in the American economy. The goal was to keep products from other nations out. With the borders closed to foreign goods, a succession of catastrophic consequences played out. These included the disappearance of trade lines, staggering unemployment, and declining farm prices. Accessibility to international commerce was vital to America's fiscal well-being. Apparently, Hoover and Congress ignored this core principle.

In 1932, Franklin Delano Roosevelt was elected to office. There was great hope for his alternative “New Deal.” Most of the components of this legendary administration’s experiment were focused on repairing depression-related conditions. However, he also hoped to stimulate the economy. FDR confidently and urgently instituted the minimum wage. He banned youth labor. His intentions focused on the nation’s recovery. It all sounds good, but the truth is that Roosevelt is often credited as being responsible for the severity of the Great Depression. There was an abundance of taxes, codes, and regulations—but no deducible results!

It wasn’t until the start of World War II and a new administration in office that things started to turn around for America.

- 1** Because of daily practice, Erica was among the best youth softball players in the nation.
- 2** It would be challenging to expedite shipping given the estimate provided by the company.
- 3** The surface of the jewel was rough and chipped.
- 4** When they refused to settle the argument amongst themselves, they were asked to vacate the room.
- 5** Kevin was excited to hear that his favorite actor would narrate a new play.
- 6** The furnace stopped working last week.
- 7** The shifting climate was among the many topics of discussion at the meeting today.
- 8** The team of divers was unable to locate the lost treasure.
- 9** A pleasing message from her parents was amongst the junk mail.
- 10** Curtis had a great vantage point and was able to see the entire opposing team.

- 1 The automobile factory will be shutting down for maintenance.
- 2 The local library provided the majority of the school's books.
- 3 Lauren found her parents' public performance of the song quite puzzling.
- 4 A recent graduate may not expect the biggest salary.
- 5 The plastic toy was trapped under the couch.
- 6 Ren loved visiting the botanic garden in the spring as the flowers started to bloom.
- 7 Allen found it necessary to work fewer hours while in graduate school.
- 8 A cavity split one of Mark's upper teeth.
- 9 Margaret spotted an electric automobile outside her house.
- 10 Victory was well within the team's grasp.

- 1** The potent odor coming from the automobile indicated a broken tank.
- 2** The graduate sat in silence as he listened to the powerful speech.
- 3** The route closed early because of possible snow.
- 4** The building was closed due to a new city ordinance.
- 5** Emily has terrible balance and slipped while racing for her favorite treat.
- 6** Caroline was capable of changing her routine, but rarely took pleasure in it.
- 7** The railway crumbled during the storm and was no longer operable.
- 8** Data showed the probable route the ship took before it disappeared.
- 9** Marty felt horrible when he accidentally broke his mother's favorite frame.
- 10** Rose's parents sat in silence as she explained how the kitten got trapped in the automobile.

- 1** The publicist took an alternative route to avoid unnecessary attention.
- 2** Becky would often criticize her younger brother for his mistakes.
- 3** The logicist had a strict routine for getting work completed.
- 4** The marketing team would need to publicize the event.
- 5** Linda realized they accidentally shut off gasoline flow when the electricity went out.
- 6** Shelby found metricism quite confusing.
- 7** The plasticity of the gasoline tank was discouraging.
- 8** Javon’s grandparents would politicize anything, even dinner!
- 9** The publicity for the event was routine.
- 10** Elasticity was an important part of the construction.

- 1 Joseph filled up his parents' tank and had to determine which kind of gasoline they used.
- 2 The successful contemporary artist encouraged many young adults to practice their talents.
- 3 Have you learned every consonant sound now?
- 4 The elaborate party was a wonderful way to celebrate 50 years together.
- 5 Every student listened intently to the introductory lesson.
- 6 Each component was carefully tested to determine what was broken.
- 7 Kayla was desperate to purchase a new microscope.
- 8 The consequent gasoline shortage lasted only a few weeks.
- 9 You may need to elaborate on what was discussed.
- 10 The corporate environment can be difficult to navigate.

- 1 After considerably listening to dozens of auditions, the band found an incredible drummer to join them.
- 2 Uncle Bill desperately searched for his train ticket.
- 3 Their parents asked, “Did you deliberately take the longest route here?” when the twins finally arrived.
- 4 Grandpa was happy to see that his photographs resurfaced after a thorough cleaning.
- 5 Can you reexamine my injury at the appointment?
- 6 The truck with the packages changed route.
- 7 Derek wanted to redecorate his ordinary and boring bedroom.
- 8 The graduate student was offered a position in management after completing the program.
- 9 The estimates given for repairs to the automobile seemed disproportionate compared to the damage.
- 10 The machinery for the projectiles required too much gasoline to operate.

- 1 Tameka was sapped after her third scrimmage this week.
- 2 The delegate was chosen because he was, among other things, exceedingly articulate.
- 3 The hostage was safe after he escaped the kidnappers.
- 4 The vintage credenza was amongst her most prized possessions.
- 5 The docile canine wagged her tail endlessly.
- 6 It was difficult for the veteran to articulate his feelings after the vintage photograph was spotted.
- 7 The city respite center was among the finest in the country.
- 8 The obstinate juvenile was quite challenging for the novice teacher.
- 9 It was a futile attempt to repair the machinery.
- 10 The shelter employee found the sly feline amongst the ducklings.

- 1** Fans were surprised to discover the celebrity had an ordinary automobile.
- 2** There was little equity in the property and it did not sustain its value.
- 3** Petra would graduate from culinary school next year.
- 4** Almost half of the varsity team was put on academic probation after the examination.
- 5** Grandpa took civic responsibility seriously and encouraged everyone he knew to vote.
- 6** Rose had an affinity for classic automobiles.
- 7** Steven thought phantoms were real, while his twin sister was a skeptic.
- 8** The veterinary sciences graduate program at the university was exemplary.
- 9** The optic nerve was injured and required surgery.
- 10** Kris listened to a popping noise as the septic tank blew.

- 1 The pungent aroma was emanating from the automobile.
- 2 Eliza defeated her opponent in an epic chess match.
- 3 The virus remains dormant until triggered by other illnesses.
- 4 Jacob inherited the pendant from his great grandmother, Helen.
- 5 Alice was hesitant to purchase such an expensive automobile.
- 6 His vacant expression suggested he did not comprehend the research.
- 7 Stagnant creek water is unsafe to drink.
- 8 The fragrant smell of lavender had a calming effect on the room.
- 9 The tainted evidence had little relevance to the detective's case.
- 10 His flagrant disregard for education was apparent when he refused to complete the work required to graduate.

- 1** The witness was deemed credible after the defense team established her route home.
- 2** There was no proof her parents were culpable for the accident.
- 3** Jessica's fitness routine made her a formidable opponent on the football team.
- 4** Tommy purchased a durable chair for the living room.
- 5** Skepticism was May's routine response to talk of spirits and mysticism.
- 6** The editor's eclecticism made the magazine a more compelling read.
- 7** Jenny didn't think it was feasible to keep up her nomadic routine.
- 8** Julie's civicism was apparent in her passionate resistance to unfair practices.
- 9** The entire family was magnanimous and hospitable.
- 10** The authenticity of the historic trail route was disputable.

- 1** As an elected representative, you must advocate on behalf of the entire populace.
- 2** The repugnant odor was the result of a leaking gasoline tank.
- 3** The incessant noise made it challenging to focus.
- 4** The agreement would be contingent upon each member contributing a percentage of the down payment.
- 5** James' grandparents were reluctant to travel after the embarrassing blunder at the airport.
- 6** Lucy felt invincible after her amazing meeting with the board of directors.
- 7** The director decided they were compatible onstage and advised them to audition together.
- 8** Color is added to transparent gasoline to help users discern each variety.
- 9** It would be tough to renovate the entire estate under the imposed time constraints.
- 10** Her exuberant sense of humor was refreshing.

- 1 Safety mandates for new automobiles are stricter now than preceding years.
- 2 The teenagers obstinately refused to participate in family volleyball.
- 3 There are several prerequisites to graduate, including an internship.
- 4 “This is an inordinate number of treats to purchase for one excursion,” Aunt Susan bemoaned.
- 5 Shawn exquisitely decorated their home office.
- 6 It was imperative to decontaminate the facility after gasoline spillage made the area unsafe.
- 7 Keshawn was legitimately confused by the baffling message from his coy cousin.
- 8 Jimmy was flustered and began inarticulate babbling as soon as the movie star approached him.
- 9 After several subordinate employees voiced complaints, leadership decided to rethink their management tactics.
- 10 Al presumed the new venue was infinitely better.

New Treatments for Hearing Loss

The promise of hearing restoration to people who have lost some of this sense may be on the horizon. The delicate cells that enable us to hear are called hair cells. These cells do not repair themselves when a loud noise leads to damage. Nor do they come back when we see a decrease in these cells during the regular aging process. With each hair cell lost, we lose some of our hearing.

Communication can be a challenge among those affected by hearing loss. When communication is inadequate, it can result in feelings of isolation. Scientists are hopeful that new medicines to treat hearing loss may be on the way.

Scientists are working on a way to replace the delicate sound-detecting hair cells in the inner ear. They've even pinpointed new molecules that help them to increase the number of hair cells. These lab-grown cells

can then be used to test medicines for hearing loss in living cells.

Ultimately, the best solution to most problems is routine prevention. Manage hearing loss by taking advantage of inexpensive earplugs that you can carry with you everywhere. Use them at loud concerts and around machinery. Encourage your friends to buy some too. Don't deliberately turn up the volume when listening to music with earbuds. You may not notice the damage fast enough to stop it. Earbuds without volume control can deliver enough sound to damage your ears in just fifteen minutes!

There is some good news. For people who suffer from unavoidable hearing loss, new medicines to replace hair cells with damage may be on the way.

Good Garden Management

Have you ever had a garden in your backyard? Perhaps you have participated in a cooperative garden nearby. Growing food is of interest to people all around the world. Some say it is hard to imagine anything better than planting a tiny seed that grows into food to eat. If gardening is a popular activity amongst your family, take advantage of the following facts to make your routine harvest even better!

To begin, no complicated machinery is needed. Just examine your yard. Choose a location with lots of sun and adequate access to water. Good soil is also a must. Your soil should be fertile but practical. Harsh substances found in some manmade products can harm your yard's surface. This can also eliminate

helpful insects living there. To avoid these negative consequences, try making your own fertile soil!

How do you make fertile soil for your garden? Just toss leftover food and other household waste, like lawnmower clippings and leaves, into a pile in the corner of your yard. If you are determined and willing to wait, these items will decompose over time, providing you with rich compost.

Now you may plant your preselected seeds. Separate delicate plants with a fence. Examine your plants for unexpected damage. Be sure to remove all unwanted bugs and other critters to encourage growth. Soon you will have no shortage of fresh food at your table!

What's Up with All this Dust? PART ONE

The Dust Bowl of the 1930s had terrible consequences to the Great Plains of America, including deaths and an epic migration. This begs us to examine the question, “What caused the dust storms in the first place?”

It's important to look back in time to answer this question. After the Civil War, a variety of government land grants convinced settlers to head westward and populate the Great Plains. As a consequence, countless unskilled farmers took to the land. Amongst the settlers were many folks who were convinced of the logic that “rain follows the plow.” They were sure that by deliberately farming the fragile land, the climate would adjust in their favor.

Before 1870, the desolate area known as the Great Plains was actually called the “Great American Desert.” This was due to its dry weather and arid land. Growing crops in this hostile environment was nearly impossible. However, by the end of the 19th century, rain began to be a routine event in this area. This newly wet climate was celebrated. It continued through the 1920s producing more and more fertile land. This strengthened the notion that farming the land would salvage the area’s ecology.

What's Up with All this Dust? PART TWO

As a result of the apparent climate change, another round of migrants decided to relocate their lives during World War I. They took route to the Great Plains also in hopes of farming the land. There was an increased demand for wheat during the war. This motivated farmers to vacate millions of acres of native grass. Advances in farming equipment made this job less difficult. Large areas of land could be plowed in much less time. However, this meant that the native grass that usually trapped moist soil, even during times of dry weather, was no longer there.

Contrary to 19th century thinking that “the rain follows the plow,” the wet climate that provided so much hope was indeed temporary. By the 1930s, the rain had stopped!

Because of all the modern farming methods, the native grass had been replaced with acres and acres of crops. When the routinely dry weather returned, the damaged topsoil, or upper layer of soil, would graduate to dry dirt. Ultimately, the dry dirt turned to dust!

This dust was effortlessly picked up by the strong winds of the Great Plains. The result was massive dust storms. Some were so big that they would last for days and even block out the sun.

History inevitably revealed that all of these economic and agricultural factors caused the dust storms of the 1930s.
